

1. Select Column containing Sales Order #

Topmost field, with Expression; column Groups on Sales Order #

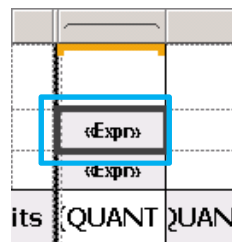

2. Right click on textbox containing Order number expression.

Menu allows for inserting row above, but not within or above group.

3. Paste expression into new cell

(above the Order Number Expression)

When I build, the following error occurs:

[rsAggregateofAggregate] The Value expression for the textrun 'Textbox37.Paragraphs[0].TextRuns[0]' contains an aggregate function (or RunningValue or RowNumber functions) in the argument to another aggregate function (or RunningValue). Aggregate functions cannot be nested inside other aggregate functions.
